“ I am proud to be part of the Vitalis team and truly stand for the organic and natural way. In my role as a breeder, I work on the continuous development of a broad and modern assortment. Market needs, growing techniques as well as consumer preferences like **taste** and **nutritional value** are elements I consider during my work to offer quality seed that unfolds its full potential under organic conditions. ”

Marcel van Diemen - Manager Breeding Facilities

Fully committed from the beginning

For **more than 25 years**, we've been passionate about and strongly believe an organic production system starts with **organically produced quality seed**.

We don't simply apply organic techniques to conventionally produced seed. Our process and our product is **organic from end-to-end**, ensuring that our varieties are well adapted to organic growing conditions in different regions. **Outstanding seed quality** and **viability** along with **broad resistances** to pests and diseases are a decisive necessity in order to be **profitable**. That's why all of our varieties are thoroughly tested for seed-born diseases. Moreover, we examine the performance of our varieties in disease prone organic agriculture systems.

The **knowledge and expertise in organic selection** and seed production results in seeds of unmatched quality and performance. **Vitalis varieties** are **certified organic** for the EU, US and Canada, and **developed without the use of genetic engineering**.

With **more than 400 certified organic varieties**, Vitalis is the leading supplier and offers an **extensive assortment** of organic vegetable seeds worldwide. The products are **distributed in more than 35 countries**.
 Twelve local research stations worldwide ensure regional adaptation of premium genetics. Our researchers work closely with **local growers**, market experts and the global Vitalis research operation to provide the different markets with the **best suitable and highest quality** certified organic product range available. We are both, pioneer and innovator for organic vegetable seeds and contribute to the increasing availability of organic vegetables **worldwide**.

For more organic vegetable diversity

With the organic market growing at an average rate of more than **10% annually** for the past decade, consumer preferences are more visible and important than ever for the **development of organic varieties**.

Product traits like **flavor**, **nutritional value** and **environmental responsibility** are only a few of the most relevant points, which we keep in mind during our **breeding activities**.
